Pendleton Underpass Overheight Warning System

Pendleton Underpass Over height Warning System

**Warning Sign with
Flashing Beacons &
Audible Horn:**

**“OVERHEIGHT WHEN
FLASHING”
“LOW BRIDGE”**

Infrared Sensor Detection

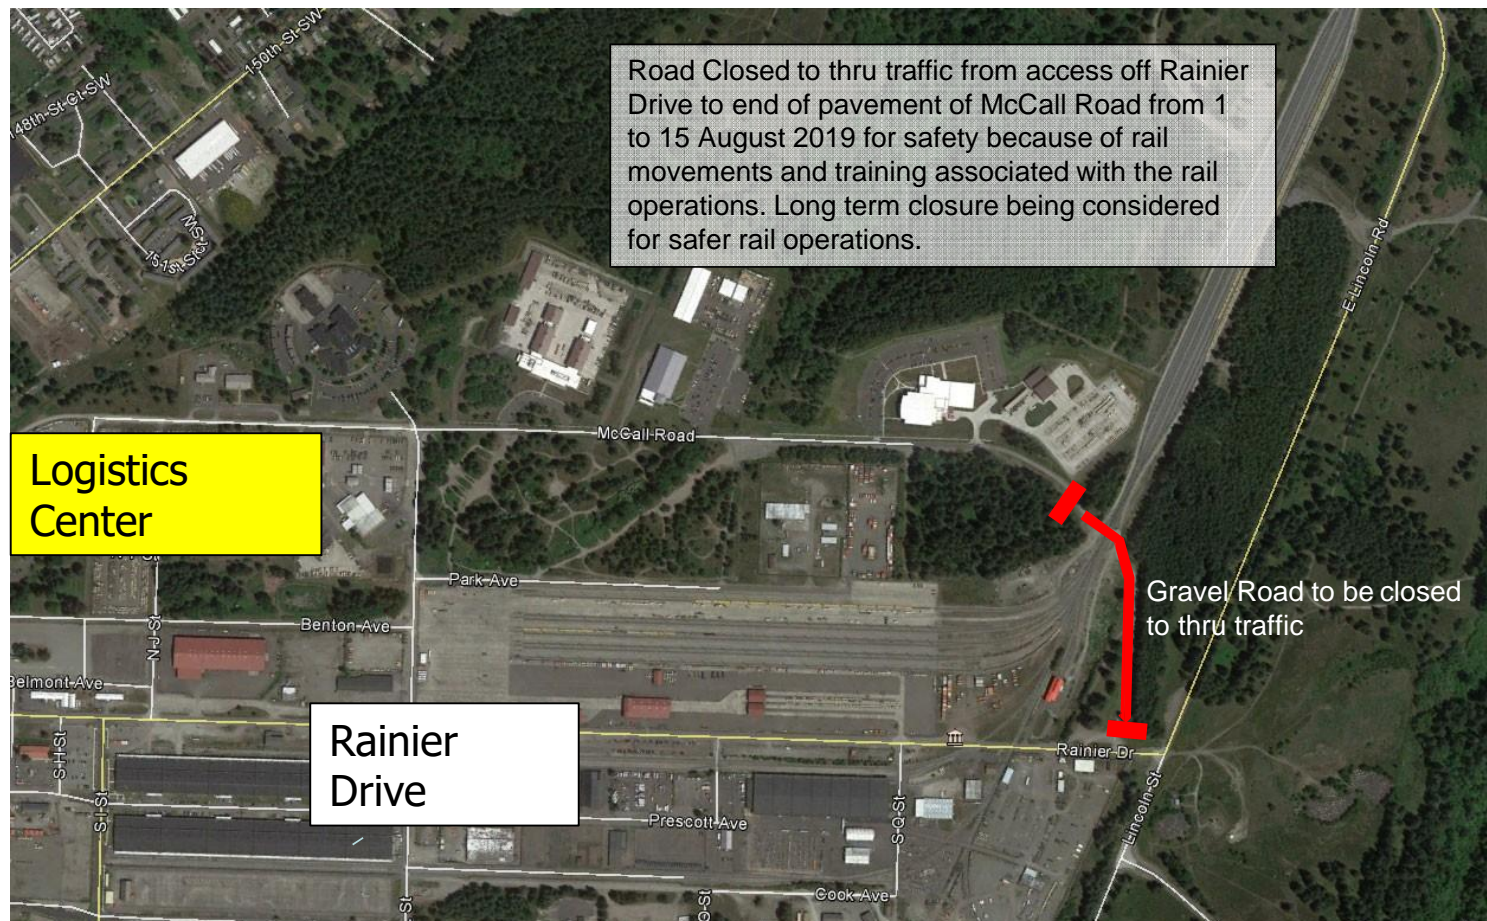

Infrared transmitter and receiver sensors are mounted on either side of the road in advance of the low structure, creating an infrared beam over the road. When an over height vehicle breaks the infrared beam, the receiver sends a wireless signal to activate the warning alert, notifying the driver that their vehicle won't clear the structure ahead. System also sounds an audible horn to alert drivers they are over height.
